PROJECTS

ECO CHARGE

Android, Flutter, Dart, Firebase | [GitHub](#)

- Developed a Flutter-based EV charging app with real-time GPS tracking, Google Maps integration, and voice assistant support for hands-free navigation and slot booking.
- Implemented smart geofencing alerts, background location services, and Firebase integration for real-time notifications and data sync.
- Built separate Admin and EV Station Owner modules within the app, enabling role-based access to manage stations, monitor bookings, and respond to user activity.

SERVICE SYNC

React.js, Material UI, MongoDB, Node.js, Express.js, PayPal | [GitHub](#) [LiveLink](#)

- ServiceSync is a home service booking platform built using the MERN stack, enabling users to schedule doorstep services like plumbing and electrical repairs. The platform offers seamless user authentication, service browsing, and a secure checkout system.
- Employees have a dedicated portal to view upcoming tasks, while admins can manage service providers. The project streamlines service booking with a user-friendly interface

Business Enhancement in Rural Sides

Html,css,Javascript,php,Mysql

- Designed and developed a PHP & MySQL-based web platform enabling direct selling of fruits, vegetables, cattle, and crafts, with features for sellers to upload products and buyers to choose between in-person pickup or integrated courier delivery.
- Established a direct distribution channel that removes middlemen, promoting fair pricing for farmers and artisans while offering customers fresh products at reduced costs.
